PROFESSIONAL SUMMARY

Transportation engineering student at UNICAMP and data professional since 2021. I work in data engineering, analytics and AI products. Today, at Hapvida, I model clinical data in Oracle and Databricks and build Power BI dashboards that operations, medical audit and leadership use to make decisions.

PROFESSIONAL EXPERIENCE

Hapvida | Data Engineering and Analytics, Innovation · Oct 2024 to Present

- I work across five AI squads: Care Operations, Medical Audit, Chronic Conditions and Prediction, Diagnosis and Graphic Methods, and Curation.
- Radio Alerta: BI dashboard that shows operations, every 30 minutes, the patients with critical cranial findings.
- Alerta Rosa: breast cancer patient navigation dashboard, from case identification in imaging reports by an AI model to the consultation with the mastologist.
- 5 Estrelas: dashboard mapping millions of service surveys from the company's own national network.
- Speech-to-text (STT) in Emergency and Telemedicine: over 2 million consultations transcribed by AI, with indicators to measure hallucination, ICD accuracy and physician adherence, parameterized with the medical audit. 47 units were activated in BI within five weeks.
- AutoCID: pipeline that suggested over 260 million ICD codes for 40 million visits between 2024 and 2026. It is refreshed every 30 days within the service SLA, without overloading the database when creating and updating the ETL.
- FinOps: GCP and Databricks costs consolidated in BI, with cost-per-SKU analysis for projects such as anatomopathology and Alerta Rosa.

Oracle SQL, Databricks (Lakebase, Unity Catalog, Jobs), Power BI and DAX, Python/pandas.

LOGFIDS IT | Data professional (consulting) · Dec 2023 to Present

- Built Premius, a SaaS portfolio management platform for brokers, with over 300 contracts registered by early users.
- I consult on AI and data engineering for clients in Brazil and abroad, from technology selection to model monitoring.

Porto Seguro via Stefanini | Data Analyst · Mar 2022 to Sep 2024

- Maintained over 40 IT governance KPIs and built dashboards in Power BI and Tableau.
- Cut the average handling time of one coordination by about 80%, reducing the area's service backlog.
- Automated data flows with Power BI ETL and BigQuery/Dataform.

Encodec LLC (USA) | AI Developer (freelance) · Nov 2023 to Apr 2024

- Built an LLM-based OCR MVP that structured over 500 pages of furniture technical specifications for the quality and production team.
- Developed parsing and querying of structured PDF content with a modular architecture.

Bloco Inovação (Brognoli) | Data Analyst · Dec 2021 to Mar 2022

- Built a national property database from public addresses, scraping data from over 5,000 municipalities.

EDUCATION

UNICAMP | Transportation Engineering · 2020 to 2027 (expected)

Research in optimization and metaheuristics applied to routing, resource allocation and planning.

TECHNICAL SKILLS

Languages and data: Python (pandas, NumPy, Polars), R, Spark, advanced SQL

Databases and platforms: Oracle, PostgreSQL, SQL Server, BigQuery/Dataform, Databricks (Delta Lake, Unity Catalog), MongoDB

BI and visualization: Power BI (DAX), Tableau, Looker Studio, Plotly

Engineering and automation: n8n, Docker, GitHub Actions, Linux

Version control and management: Git, GitHub, Azure DevOps, Jira (Scrum)

AI coding: OpenCode, Antigravity CLI, Claude Code

AI: scikit-learn, LLMs (GPT, Gemini, Claude, DeepSeek), A/B testing
